Turkeys in NTIP Flocks and Their Distribution by States and Varieties,

1944-53

The following tabulation is based on reports by official State agencies for flocks participating in the National Turkey Improvement Plan and shows the number of birds and percentage distribution by varieties. The data indicates trends in popularity of the different varieties over the ten year period covered by the reports. There is some variation in the reporting of Standard and Broad Breasted Bronze flocks due to the fact that in some flocks participating in a pulorum class only (not in a breeding stage) no determination of breast width is made. Some flocks of varieties other than Bronze have been reported as Broad Breasted but the number so classified is too small to justify separate classifications in the tabulation. Prior to 1950-51 crossmated flocks were classified as "others." The division totals are for the year 1952-53.
